

Project Executable Files

Date	15 March 2026
Team ID	SWTID-2026-5807
Project Name	AI-STUDYBUDDY
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	No (listed in README)
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	No
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
ai-studybuddy/
|-- index.js           - Entry point (Express server)
|-- package.json       - Node.js dependencies
|-- README.md          - Setup and run instructions
|-- uploads/           - Temporary file storage
`-- src/
    |-- controllers/   - authController, materialController, adminController
    |-- middleware/    - auth.js (protect, adminOnly), upload.js (multer)
    |-- models/        - User.js, Material.js
    |-- routes/        - auth.js, materials.js, admin.js
    `-- utils/         - db.js, gemini.js, tokens.js
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted - runs locally at http://localhost:5000
Login Credentials (Demo)	No preset login - register a user with POST /api/auth/register (role: student or admin)
Platform / Hosting Provider	Local machine (Node.js + MongoDB)
Repository Link	https://github.com/sakthithilipkumar/AI-StudyBuddy
Demo Video Link	https://drive.google.com/file/d/11CTAHFYP6l_I-tlc9EQ1sz70QiWwQvW8/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Node.js with npm, MongoDB (local or a MongoDB URI), a Gemini API key, and Postman or curl for testing.

Step 1: Clone the repository: `git clone https://github.com/sakthithilipkumar/AI-StudyBuddy`

Step 2: Install dependencies: `npm install`

Step 3: Create a .env file with `PORT=5000`, `MONGO_URI=mongodb://localhost:27017/ai-studybuddy`, `JWT_ACCESS_SECRET`, `JWT_REFRESH_SECRET`, `GEMINI_API_KEY` and `NODE_ENV=development`

Step 4: Make sure MongoDB is running.

Step 5: Start the server: `node index.js`

Step 6: Open Postman at `http://localhost:5000/api` - register/login, upload a material, then call the AI endpoints.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Not deployed to a public host; runs locally only	Run locally using the README steps
2	No automated test files included	Test endpoints manually with Postman or curl
3	AI features need a valid Gemini API key and internet	Add GEMINI_API_KEY to the .env file
